

MANAGING DIGITAL IMAGES

USING ADOBE PHOTOSHOP

LIGHTROOM

Sunday 4 June 2017
10am to 1pm

Are you disappointed with how the Microsoft and Apple Photos apps handle your photos?

Would you like to add keywords,
have before and after views when editing images,
infinitely better control over correcting tones,
be able to find and catalogue your images easily,
and so much more?

Come and see why Lightroom is the one application for all your digital image management and editing. And you only need one copy of each image for multiple uses.

Attendees to this course will be entitled to a discount to the limited places available on the follow-up course titled ***Scanning and Photo Editing Workshop***, allowing you to put what you learn into practice on your own photographs.

Course 705

HAGSOC Education Room
41 Templeton St, Cook

Cost: \$20 HAGSOC members, \$30 non-members
Includes morning tea

Book online under the Courses tab at www.familyhistoryact.org.au

Editing your images
A brief look at organising files
- 1pm** Close

ABOUT DANNY O'NEILL

Danny comes from a photographic background, with the last two decades at the National Film and Sound Archive in Film Preservation. Taking his first photos on a Box Brownie at the age of eleven started his love affair with images that continues to this day. It wasn't until Lightroom 5 came out that he saw how integrated its photo editing and cataloguing system was, that helped him streamline his many file systems developed over five decades of photography.
