Scanning + Photo Editing workshop

Sunday 18 June 2017
10am to 3.30pm

a workshop
for those serious about
getting good scans,
editing and managing them

An all day workshop scanning and working with images.
Sounds heavy?
It might be if you weren't actively learning and working
on your own photographs. People learn and remember
best by doing. The workshop will be collaborative and a
tad fun. You will need to be comfortable with using
your computer. Bring a comfy cushion to sit on.

Questions? email:registration@familyhistoryact.org.au

Presenter: Danny O'Neill

Read before booking

Read the pre-requisites on the back before registering.

Minimum of eight (8) participants needed before workshop runs.
Cancellation or late booking refunds by EFT only.

Part A – Importing and File management

1.30 Part B – Editing

2.30 Afternoon tea

2.50 Part C – Map module and different ways to output

3.30 Close

Workshop Pre-requisites

Laptop, or a desktop computer you can carry in. Power is available at each desk.

Scanner – flatbed with film capability, **or** a dedicated film scanner, plus a flatbed scanner. Basic understanding of your scanning software recommended.

Images – in a camera or phone and able to connect to your computer (or use those you can access on the computer). Plus any negatives, slides or photographs you want to scan.

Copy of Lightroom - If you download a trial version, make sure it will still be active for a few days after the workshop. Strongly suggest downloading and activating only *one or two* days before 4 June (Course 705), if using a trial download.

Good to know

You will be working on your own images, with everyone doing each step together before moving onto the next step. Time will be given for everyone to follow the steps, and those more experienced can help others. The aim is to give you confidence and be inspired to continue scanning and editing well after the workshop ends. Summary notes will be provided afterwards.
